# **SMT POWER INDUCTORS**

Wire Wound. Ruggedized

Current Rating: Over 22Apk

Finish is Tin/Lead (Sn63/Pb37)

Moisture Sensitivity Level: 1

Max Reflow Temperature: 235°C

Electrical Specifications @ 25°C — Operating Temperature -55°C to +130°C

#### Notes:

1. The rated current as listed is either the saturation current or the heating current depending

on which value is lower.

- 2. The saturation current is the typical current which causes the induc tance to drop by 20% at the stated ambient temperatures (25°C and 100°C). This current is determined by placing the component in the specified ambient environment and applying a s hort duration pulse current (to eliminate self-heating effects) to the component.
- 3. The heating current is the DC current which causes the part temperature to increase by approximately 40°C.
- 4. In high volt\*time applications, additional heating in the component

core losses in the inductor which may neccessitate derating the current in order to limit the temperature rise of the component. To determine the approximate total losses (or temperature rise) for a given application, the coreloss and temperature rise formula can be used:

 $\Delta B$  (Gauss) = K2 \*  $\Delta I$ 

Core Loss (W) = 1.5E-13 \* (Freq\_kHz)  $^{1.63}$  \*  $\Delta B^{2.62}$ 

- 5. The temperature of the component (ambient plus temperature rise) must be withinthe stated operating temperature range.
- 6. RoHS compliant version available (add suffix NL to the part number).
